The “Territoires Hydrogène” Call for Projects: The Stor-H Smart Station Project Receives Government Label from **Ségolène Royal, Minister of the Environment, Energy and Marine Affairs, responsible for International Climate Relations.**

Stor-H, the new hydrogen standard

“

The local authorities should be commended for realising the importance of developing a hydrogen sector

”

Stéphane Aver, CEO Aaqius

Further to the “Territoires Hydrogène” call for projects, issued by Ségolène Royal, Minister of the Environment, Energy and Marine Affairs, responsible for International Climate Relations, to test the use of hydrogen energy across selected regions of France, the Stor-H Smart Station project developed by AAQIUS was officially selected from some one hundred projects nation-wide to receive the Government label.

The selection process was run by an expert group including public bodies and financial institutions (Ministries of Finance, Economy and Environment, CGI, ADEME, BPI France, and Caisse des Dépôts et Consignation).

For AAQIUS and its partners, the SNCF, Air Liquide, ECCITY and Cycleurope, the label comes as official recognition of a highly-innovative technology and the emergence of a hydrogen economy that holds the promise of zero-carbon mobility.

Many territories have already stated their readiness to host Stor-H's deployment and ecosystem, including the BRITTANY and NORMANDY Regions, the metropolitan areas of NANTES and LA ROCHELLE, and others.

Stéphane Aver,
CEO Aaqius

In the words of AAQIUS CEO, Stéphane Aver: The local authorities should be commended for realising the importance of developing a hydrogen sector, as a gamble on the future, a key instrument in the energy transition and the source of major ripple effects across all of industry and society. The AAQIUS teams are exceedingly pleased to have been awarded this label, which opens up promising avenues, in line with the historic decisions of the COP21 against climate change.
